## FACILITIES

Here at Bee, we have extensive manufacturing facilities including complete assembly lines and injection moulding apparatus. Our high-tech manufacturing facilities are of exquisite quality, delivering an average volume of 200,000 lighting components per year, both interior and exterior.

### UV CURING

Our UV curing process enables us to securely assemble products in house, shortening overall lead times, making it a cost effective solution.

### INJECTION MOULDING

Our extensive injection moulding facilities enable us to mould products all in house reducing lead time and costs of sourcing parts elsewhere. We can strictly control the process of our products, delivering an optimum result every time.

### ELECTRONICS MANUFACTURE & TESTING

We have in-house electronics manufacturing capabilities with capacity for over 1 000 000 surface mount components per hour.

## ETHOS

Although we are a rapidly growing company, our values remain consistent.

### INNOVATION

We pride ourselves on accepting and overcoming challenges. When tasked with the seemingly impossible, we always deliver. Our Ford GT carrier solution weighs in at 280g, four times lighter than our closest competitor.

### CRAFTSMANSHIP

All of our projects are british designed, engineered and manufactured to the most precise quality following our certified procedures.

### ECO AWARENESS

We have begun our journey to a more eco friendly future, focusing on the impact our materials and processes have from cradle to grave; we use Engle ECO-drive machines which use 60% less energy than its competitors.

### UNIFICATION

Bee understand that projects are built on trust; we seek to overcome challenges together, building friendly relationships from the beginning of a project and beyond.
